

"Analysis of a Certified Green Building"

For this assignment, students are required to analyze a certified building located in Turkey. There are no restrictions on the building type or size, but it must be certified with one of the systems discussed in class and its score sheet should be attached.

Students must analyze each criterion based on the score sheet and note any innovative approaches. Graphics, pictures, photos, tables, or informative schemes can be used with proper citation.

Each student must make a presentation during class hours before submission. Posters must be A1 size and in portrait mode.

Final submissions should include hard and digital copies. Hard copies should consist of A3 posters in color and a digital version on a CD. Digital submissions should be made via the webonline system.
